How to put sms on messenger. Phone number indonesia sms. How to turn on sms in messenger.

Vodafone-Idea's Content Template Registration Process Log into your account from VILPOWER Portal. Choose template type - Promotional/ Transactional/ Service Implicit/ Service Explicit. Select a category from the drop-down list and click on "+Add". Search for the header you already created and select it Enter template name desired and select template message type. Enter the message content and insert variable placeholders by clicking variable insert button wherever required. Click on save. The status would change to 'Approved' once it is approved by the Registrar. To register a content template, a principal entity needs to follow below mentioned steps: Login to Tata DLT Platform using principal entity credentials Go to Content template -> Register new content template Define template type - Promotional/Transactional/Service Select category of content and a registered header Provide content for fixed part and mention variable content in the template as {#var#} Submit template for verification Content template registrar will validate and verify details provided by the principal Entity within 2 working days On successful registration, the content template registrar will actions (approve/reject) and post approval register content template ID on DLT platform. The registrar function will communicate successful renewal or any discrepancy in case of incorrect details with the applicant on the registered e-mail and mobile number in the defined TAT. It is required to register content template on DLT platform to acquire consent from new subscribers prior to transmission of commercial communication. Login to the Airtel DLT Portal using Telemarketer/Principal Entity login credentials/Go to Content template and select "Add new template" Define template type - Promotional/Transactional/Service Select category of content and a registered header Provide content for fixed part and demarcate variable content in the template using insert variable button Submit template for verification Content template registrar will validate and verify details provided by you within 60 minutes On successful registration, the Content template registrar will approve and register consent template ID on DLT platform The Registrar Team will communicate successful registration and any unsuccessful submissions in case of incorrect details with the applicant on the registered e-mail and mobile number within 72 hours of registration. Templates are created for Commercial Communication and as per TRAI guidelines all the Principle Entities needs to register their Templates before sending Commercial Communication. In the Entity portal on the side bar click on the Templates option to view the page In the Template page click on Add New Template button to create new Templates Fill an appropriate Template name basis on the business requirement in the Template Name column In the Communication Type column select the type of communication from the following. In the Content Type select any of the following options: TransactionalPromotionalService ExplicitService Implicit In the Consent Template ID column select the relevant Consent Template registered on DLT from the drop-down list. Consent Template ID is not mandatory for Transactional and Service Implicit commercial communications In the Content Category column select any of the Categories from the drop-down list as given which is appropriate for the Template to be created In the Template Type column, it will either be TEXT or UNICODE and it will be auto fetched basis on the selection of language for the content. Please note, any language other than English will be taken as Unicode In the Content creation section, there are two options available:Copy/Paste MessageCreate New Message (Type)Select any of the option basis on the requirement of content created in the Copy/Paste Message option, copy any message and create the required content for the Template In the Create New Message option, type the required content In the Create New Message box type the required content and to add variables there are options available on the panel Messages in languages other than English can be created, such templates type will be treated as Unicode. Language can be selected from the drop down list Press the Get OTP link to receive the One Time Password on your registered mobile and email id. Once received, type the same in OTP column to authenticate the process Press Submit button to confirm and send the request for approval by the Operator To register a Content Template, a Principal Entity please follows the below steps: Login to TrueConnect.jio.com as Principal Entity Go to template -> content template registration Define template type - Promotional/Transactional/Service Select category of content and a registered header. The registered header should be available for selection basis category of content only - numeric for promo and alpha for Others Also keep in scope that in the end state we should allow the same header for all category types Submit template for approval JIO's Registrar will validate and verify details provided by the Principal Entity On successful registration, the Registrar will approve and register content template ID on DLT platform The Registrar will communicate successful registration or any discrepancy in case of incorrect details with the applicant on the registered e-mail and mobile number It is required to register content template on DLT platform to acquire consent from new subscribers prior to transmission of commercial communication. To register a consent template, a principal entity or telemarketer need to follow below mentioned steps: Login to the BSNL DLT Portal using Telemarketer/Principal Entity login credentials Go to Content template and select "Add new template" Define template type - Promotional/Transactional/Service Select category of content and a registered header Provide content for fixed part and demarcate variable content in the template using insert variable button Submit template for verification Content template registrar will validate and verify details provided by you within 60 minutes On successful registration, the Content template registrar will approve and register consent template ID on DLT platform The Registrar Team will communicate successful registration and any unsuccessful submissions in case of incorrect details with the applicant on the registered e-mail and mobile number within 72 hours of registration. Once you have applied for the template, you will hear back from the operators regarding the status within 24-48 hours. How to add new template in gupshup SMS API? Template messages are Highly Structured(HSM)/ Notification messages. Once your WhatsApp Business API is Live, you can create template messages and submit them to WhatsApp for approval. You can send Template messages to users that you have opted-in. To know how you can opt-in users, read frequently asked questions. HeaderValueContent-Type:application/x-www-form-urlencodedApikyeYour Gupshup account API key KeyTypeDescriptionSamplepestringYour registered WhatsApp Business API phone number.The number must be in E. 164 format.917834811114destinationstringUser's phone number.919876543210templateobjectSee template object description{"id": "c6aacef6-bcb0-4fb1-8100-28c094e3bc6b","params": [{"Agent","Local Address","Tracking code"}]}messageobjectRrequired only if the template is of type Media - image, Video, Document,pdf or location.See message object descriptionimage: {"type": "image", "image": {"link": ""}}Video: {"type": "video", "video": {"link": ""}}Document: {"type": "document", "document": {"link": ""}}Location: {"type": "location", "location": {"longitude": "", "latitude": ""}} KeyDescriptionSampleIdUnique identifier for a templateUse this API to get all template details for an app.c6aacef6-bcb0-4fb1-8100-28c094e3bc6bparamsArray of placeholders/variables in the template in the order of occurrence.["Agent","Local Address","Tracking code"] KeyTypeDescriptionSamplepestringThe type of media. Possible values are: image, video, document and locationimageimage, video, document, or locationobjectThis object has the link to the type of media file specified ("link": " ") Send message API requests received by our platform are processed asynchronously, and hence you will always get an HTTP SUCCESS(200 to 299) response range if the API request made is correct. The API response includes an object with a Gupshup unique message identifier and status as submitted. Your callback URL/webhook will receive a message event stating the submitted message to the WhatsApp API client(which eventually sends the message to the customer) is enqueued or has failed. HeaderValueContent-Type:application/x-www-form-urlencoded {"status": "submitted", "messageId": "e4e468a0-1203-4c85-8dc3-49d0b3226a35"} The Gupshup unique message identifier that is the messageId in the API response will help you track messages through the inbound message events - enqueued, failed, sent, delivered, and read that you obtain on your webhook/callback URL. Following are sample API requests for each message type. These examples are for your reference only. You can create templates from settings in the app dashboard and submit them to WhatsApp for review. curl -location -request POST \ -header 'apikye: 2xxc4x4xx2c94xxx2f9xx9d43xxx8a' \ -header 'Content-Type: application/x-www-form-urlencoded' \ -data-urlencode 'source=917834811114' \ -data-urlencode 'destination=918x98xx21x4' \ -data-urlencode 'template={"id": "c6aacef6-bcb0-4fb1-8100-28c094e3bc6b", "params": [{"Agent","Local Address","Tracking code"}]} curl -location -request POST \ -header 'apikye: 2xxc4x4xx2c94xxx2f9xx9d43xxx8a' \ -header 'Content-Type: application/x-www-form-urlencoded' \ -data-urlencode 'source=917834811114' \ -data-urlencode 'destination=918x98xx21x4' \ -data-urlencode 'template={"id": "c6aacef6-bcb0-4fb1-8100-28c094e3bc6b", "params": [{"Agent","Local Address","Tracking code"}]} curl -location -request POST \ -header 'apikye: 2xxc4x4xx2c94xxx2f9xx9d43xxx8a' \ -header 'Content-Type: application/x-www-form-urlencoded' \ -data-urlencode 'source=917834811114' \ -data-urlencode 'destination=918x98xx21x4' \ -data-urlencode 'template={"id": "c6aacef6-bcb0-4fb1-8100-28c094e3bc6b", "params": [{"Agent","Local Address","Tracking code"}]} curl -location -request POST \ -header 'apikye: 2xxc4x4xx2c94xxx2f9xx9d43xxx8a' \ -header 'Content-Type: application/x-www-form-urlencoded' \ -data-urlencode 'source=917834811114' \ -data-urlencode 'destination=918x98xx21x4' \ -data-urlencode 'template={"id": "c6aacef6-bcb0-4fb1-8100-28c094e3bc6b", "params": [{"Agent","Local Address","Tracking code"}]} curl -location -request POST \ -header 'apikye: 2xxc4x4xx2c94xxx2f9xx9d43xxx8a' \ -header 'Content-Type: application/x-www-form-urlencoded' \ -data-urlencode 'source=917834811114' \ -data-urlencode 'destination=918x98xx21x4' \ -data-urlencode 'template={"id": "c6aacef6-bcb0-4fb1-8100-28c094e3bc6b", "params": [{"Agent","Local Address","Tracking code"}]} curl -location -request POST \ -header 'apikye: 2xxc4x4xx2c94xxx2f9xx9d43xxx8a' \ -header 'Content-Type: application/x-www-form-urlencoded' \ -data-urlencode 'source=917834811114' \ -data-urlencode 'destination=918x98xx21x4' \ -data-urlencode 'template={"id": "c6aacef6-bcb0-4fb1-8100-28c094e3bc6b", "params": [{"Agent","Local Address","Tracking code"}]} curl -location -request POST \ -header 'apikye: 2xxc4x4xx2c94xxx2f9xx9d43xxx8a' \ -header 'Content-Type: application/x-www-form-urlencoded' \ -data-urlencode 'source=917834811114' \ -data-urlencode 'destination=918x98xx21x4' \ -data-urlencode 'template={"id": "c6aacef6-bcb0-4fb1-8100-28c094e3bc6b", "params": [{"Agent","Local Address","Tracking code"}]} curl -location -request POST \ -header 'apikye: 2xxc4x4xx2c94xxx2f9xx9d43xxx8a' \ -header 'Content-Type: application/x-www-form-urlencoded' \ -data-urlencode 'source=917834811114' \ -data-urlencode 'destination=918x98xx21x4' \ -data-urlencode 'template={"id": "c6aacef6-bcb0-4fb1-8100-28c094e3bc6b", "params": [{"Agent","Local Address","Tracking code"}]} curl -location -request POST \ -header 'apikye: 2xxc4x4xx2c94xxx2f9xx9d43xxx8a' \ -header 'Content-Type: application/x-www-form-urlencoded' \ -data-urlencode 'source=917834811114' \ -data-urlencode 'destination=918x98xx21x4' \ -data-urlencode 'template={"id": "c6aacef6-bcb0-4fb1-8100-28c094e3bc6b", "params": [{"Agent","Local Address","Tracking code"}]} Did this page help you?
